PROFESSIONAL SUMMARY

Software engineer with five years at John Deere who built the team's AI-ops workflow from scratch: a position-addressed LLM knowledge system that 12 engineers route through, 40+ agentic skills automating Azure DevOps and development workflows, driven from zero to daily use through multiple presentations and demos. Daily GitHub Copilot CLI & Claude Code user with production LLM-API experience (multi-model fallback, retry, server-side quota tracking) and backend/MCP integration, grounded in shipping production C++/Qt on safety-critical systems.

CORE COMPETENCIES

Claude Code · Copilot · Codex · Agent & skill authoring (AGENTS.md, SKILL.md) · Model Context Protocol (MCP) · Prompt engineering & evaluation · Multi-agent orchestration · LLM-as-judge / QA
Anthropic Claude · OpenAI · Gemini · Vercel AI SDK · Python · Node.js · FastMCP servers · REST & third-party API integration (Azure DevOps) · Next.js · XML · TypeScript · JavaScript · HTML
C++14 / C · Git · CI/CD (Jenkins, GitHub Actions) · Google Test / Mock · TDD · Code review · Systematic root-cause debugging

PROFESSIONAL EXPERIENCE

SOFTWARE DEVELOPER

June 2024 – Present

John Deere, AutoPath Team, Austin, TX

- Built the team's AI-ops workflow from scratch on position-addressing principles: an LLM knowledge system that 12 engineers and 40+ agentic skills route through with file:line provenance.
- Authored AI assistants automating Azure DevOps workflows end to end (stale-bug alerts, overdue code-review notifications) plus a composite autopath-test-engineer agent for autonomous test workflows.
- Standardized prompt and evaluation practices (350+ line copilot-instructions.md, AGENTS.md, MCP integration) and drove AI-tooling adoption from zero to daily across the team.
- Shipped production C++/Qt features end to end on AutoPath autosteer (AB-Curves, Guidance Zones multi-heading path plans), owning database schema changes, service architecture, and UI.

QA/QI SOFTWARE ENGINEER

February 2023 – June 2024

John Deere, Guidance QI Team, Austin, TX

- Resolved 38 major and 60+ minor defects across Gen4OS 4060/4600 displays; earned the Guidance Department Star Award (1 of 6).
- Root-caused SIGSEGV/SIGABRT crashes and threading defects (race conditions, deadlocks, priority inversion) in real-time embedded Linux using GDB, valgrind, and ASAN.

PART-TIME SOFTWARE ENGINEER

July 2021 – December 2022

John Deere, Guidance QI Team, Ames, IA

- Resolved 24 embedded C++/Qt defects for Gen4OS displays using Google Test and Froglogic Squish while a full-time student at Iowa State University.

SELECTED PROJECTS

ktncodes.com - Agentic Portfolio | *ktncodes.com*

- Next.js portfolio with macOS Finder-metaphor workspace, agentic chatbot (Vercel AI SDK, 6 tools), multi-model fallback (Gemini -> OpenAI), per-IP rate limiting, and Zod-validated content pipeline.
- Redesigned June 2026 to position AI workflow engineering capabilities: pipeline diagram, SYS-NN case studies, and capabilities spec table.

ideaverse-os - LLM-Agnostic Knowledge Vault CLI | *github.com/ktnCodes/ideaverse-os*

- Published npm CLI (Node, TypeScript) that bootstraps a personalized position-addressed, LLM-agnostic knowledge vault.
- Bundled skills work across Claude Code, Cursor, Aider, Codex, and Gemini from one harness-agnostic source.
